

Speaker 1: We were business owners. We owned a storage facility, and a truck rental, and a mail center, and for years I drove school buses. I fell 15 feet, and I punctured my lung, but I broke nine ribs right in half. From the minute I got into the ambulance onto the way to the hospital, all of a sudden, smells were magnified for me. Everything.

I could smell the ambulance driver. When I got to the hospital, I couldn't take the smell. All of the sudden I started having asthma attacks, and I never had asthma in my life. An asthma attack with nine broken ribs is just about unbearable. It was awful.

I spent 12 days in the hospital on two different occasions. After that, I couldn't go anywhere without wearing a mask with a washrag on my face to keep from smelling, because if I got a whiff of that stuff, man, I was in a full fledged gasping, choking attack. We had to only do what I could do to be around people, so I mean, even going to the grocery store we had to be prepared for everything. I never went anywhere without 10, 15 tubes of Albuterol for my nebulizer. We kept trying all these different medicines, and nothing really worked.

I was having trouble with my hip really bad, and I had heard about the stem cell therapy from a friend in Arizona, and when I came home, I seen some blurbs about it on Facebook. I thought, "Oh gosh, I'm going to call about this and see what they could do for me." I talked to Jeff, and we discussed the different modes of what I could do. I really needed help on my hip, because it was really bad, so he did my hip, and then we did an IV therapy.

That was April 24th, and it has changed my life to the point where I just can't even tell you. I don't smell you anymore, I don't have attacks all the time. I don't have to wear a mask to go out in public. I have not had an attack since April 24th, and that's the day that I had the treatment. My hip is way, way better. My life is turned around for the best. I am so thrilled.
